Our Vaccine Policy

Our practice supports vaccinating all children according to the guidelines as outlined by the Academy of Pediatrics and the Center for Disease Control. Vaccines have been proven to be safe and effective in preventing diseases and health complications in children and adolescents. We are happy to answer any of your questions and provide you with information regarding the vaccines provided in our office.

If you have decided that you do not wish to vaccinate your child(ren), we unfortunately will be unable to accept your child(ren) as patients.
